

## **Cart Path Construction**

Using our Engineered Base Stabilizer (EBS) mixed in with the in-situ soil to create a natural looking cart path utilizing our construction methodology will leave you with a sealed flexible bound surface which will hold up to the daily abuse from golf carts and maintenance vehicles as well as extreme weather conditions while improving the aesthetics of your golf course.

Constructing an in-situ cart path using this method will eliminate the need for cement or concrete, reduce the maintenance, prevent cracking and breaking of the surface, reduce freeze-thaw heaving, increase the load bearing strength of the soil, provide dust suppression and minimize the impact on the environment.

**A cart path is essentially a narrow road – and should be designed and constructed in the same manner, following the same principles and specifications as a normal surfaced road.**

**Grader used for prep and leveling**

**Rotovator used for mixing & tilling**

**Completed natural looking path**

**Site inspection with Jack Nicklaus**

On-Course Solutions patented **"nature's path"** coating applied as a surface seal over an in-situ cart path or over an ordinary concrete cart path will not only vastly improve the aesthetics of your golf course but will impact the integrity, strength and weather resistance of your cart path.

Applying this type of coating over your cart path will help prevent cracking and breaking of the surface, increase skid resistance, become water and weather resistant, reduce maintenance, cut labour and maintenance costs, be guaranteed to last and greatly contribute to the enhanced superior look and feel of your golf course.
